

ABSTRACT OF THE DISCLOSURE

To provide a display device capable of displaying a good quality image. According to the present invention, there is provided a display device comprising:

a display panel composed of a pixel portion in which a plurality of TFTs are arranged
5 in matrix, a source driver, and a gate driver;

an image signal processing circuit for processing an image signal input from an external; and

a control circuit for controlling the display panel and the image signal processing circuit, characterized in that

10 the image signal processing circuit corrects the image signal on the basis of a correction table and feeds the display panel with the corrected image signal.
